$\langle L' \rangle = \frac{1}{a} \sum_{m=1}^{\lfloor \frac{m+1}{m+1} \rfloor} \left(\frac{m+1}{m} \right)^{h-mk} \left(\frac{-1}{m+1} \right)^k \binom{h-mk-1}{k}$ (1)assuming that the opponent does not regenerate. For $h \gg m$ equation 1 has the asymptotic form $\langle L' \rangle \sim \frac{2}{am} \left(h + \frac{m-1}{2} \right)$ (2)

If the opponent regenerates every
$$T_R$$
 ticks and is hit every T_A ticks, then the expected number of hits to kill and the expected number of hitpoints regenerated are

If a is the accuracy and m the maximum hit, then the expected number of

hits to kill an opponent with h hitpoints is

$$\langle L \rangle \approx \frac{1}{1 - \frac{T_A}{T_A}} \left(\langle L' \rangle - \frac{T_A}{T_A} \frac{2(m+1)}{1 - \frac{T_A}{T_A}} \right) \tag{3}$$

$$\langle L \rangle \approx \frac{1}{1 - \frac{T_A}{T_R} \frac{2}{am}} \left(\langle L' \rangle - \frac{T_A}{T_R} \frac{2(m+1)}{(am)^2} \right)$$

$$\langle R
angle pprox rac{T_A}{T_R} rac{a}{am} \left\langle T_R \left(am
ight)^2
ight
angle$$

(4)

respectively. The exact values of
$$\langle L \rangle$$
 and $\langle R \rangle$ can be obtained as solutions to

respectively. The exact values of
$$\langle L \rangle$$
 and $\langle R \rangle$ can be obtained as solutions linear systems of h equations.
The kill rate and damage rate are

The kill rate and damage rate are

 $v_k = \frac{1}{T_A \langle L \rangle}$ and $v_d = \frac{h + \langle R \rangle}{T_A \langle L \rangle}$ (5)

respectively. In particular, if T_A is given in seconds, v_d is the DPS.
